

## **NURSE TAKES HER TEMPERATURE - PLAY DOCTOR'S 5TH VIDEO!**

In the search to keep making the best videos for the medical fetishist, I teamed up with the Nurse to provide you with a tutorial on temperature taking. In this tutorial, we join the Nurse in the exam room as she shows us the thermometers that she will be using and briefly describes the various methods for temperature taking. [For the detail oriented - she is wearing a white dress, white bra, white garter belt & stockings, and white heels ---- and, yes, she also has a nurse's cap!]

The Nurse begins by taking her oral temperature. She sits on the exam table (and, yes, it is covered with the white crinkly paper). While the thermometer registers, we can't help but get a good look at her long stockinged legs and pantied crotch. When the four minutes are up, she takes the thermometer from her mouth and notes the reading.

Next, it's time for the axillary (armpit) method. To do this most effectively, the Nurse sheds her dress, leaving her clad only in . . . her white bra, white garter belt & stockings, and white heels --- and, yes, the nurse's cap. Again, she sits on the exam table as the thermometer registers, giving us an even better view now that she is just dressed in her lingerie --- and she's soooo sensuous, too! After letting 4 minutes elapse, she takes the reading and then gets off the exam table, ready for the next method . . .

You knew it was coming ---- Now it's time for the rectal temperature! The Nurse asks us would we mind if she removes her panties. Would we? Sensing that our answer would be nothing but "Go ahead - PLEASE!", she takes off her panties. With an elaborate explanation, the Nurse readies herself for rectal temperature taking by putting on exam gloves and lubricating her finger with K-Y jelly. Then she bends over the exam table and spends a nice long time applying lubricant around her anus and then slowly inserting her finger into her rectum. She applies K-Y to the thermometer and slowly inserts it into her rectum. While she's bent over the exam table, she makes adjustments to the thermometer, moving it in and out, and twirling it around. After a while, she removes the thermometer so that she can demonstrate another position - lying on her left side with top leg raised and we get to see another thermometer insertion! And then, she wants to show us that another position would be on "all fours" --- and what a great position this is, huh? More thermometer insertion and manipulation before the final position of lying on her stomach. But she's got such great long legs and such a nice little firm butt that this is a great position, especially since she reaches back to spread her cheeks for us to get a better view, and then she raises up so we can see just a little bit more. But - all good things do come to an end and she has finished demonstrating the methods for taking a rectal temperature. She's not going to disappoint us - as she does a nice slow removal of the thermometer from her spread cheeks!

The final method of temperature taking is vaginal. By now, the Nurse has probably gotten just a bit aroused from the rectal temperature demonstration but she tries to maintain her professional composure. She's going to do this demonstration while on the exam table in the GYN stirrups. She puts on an exam glove and applies K-Y to her index finger, then puts the K-Y around the opening to her vagina - very slowly in a stroking motion - and then she inserts her finger into her vagina . . . and she doesn't remove it so quickly, either. When she is ready, she lubricates the thermometer (a non-mercury model) and inserts it into her vagina. She tries to leave it in place, but it's not long before she has to move it in and out while the fingers of her other hand are stroking

her vaginal lips or rubbing her clitoris. Needless to say, this turns into the Nurse's masturbation session and we get to watch her experience a very nice orgasm as a result of taking her vaginal temperature. Once she's "recovered", she notes the reading and begins the clean-up process.

Here's where things go a little south --- at least for the cameraman. The Nurse notices that the cameraman is rubbing his crotch and she has caught him in the act! She makes sure that the video camera is firmly planted on the tripod, and recording, because now she is going to have some fun. She makes the cameraman stand before her and the exam table as she feels the hardness in his pants and chastises him for getting excited. She is going to discipline him by spanking him and she tells him to remove his pants. When he's reluctant, she does it for him and that's when she discovers that he's wearing white nylon women's bikini panties! Now the cameraman is really humiliated and the Nurse chastises him even further. It's over the exam table, as she pulls the panties up between his buttocks to administer the spanking . . . and a good spanking he gets, all the while protesting and trying to talk his way out of it. But she reddens his cheeks very well - and then has him get on the exam table (still with the white crinkly paper) on "all fours". After putting on exam gloves and applying K-Y to his rectum, she gets a larger thermometer and, despite his continued protesting (to which she responds with more spanking) takes his rectal temperature - of course, for longer than is necessary and sliding the thermometer in and out of his rectum and moving it around. Next, she wants to take a look inside with the anoscope, but not before a thorough Digital Rectal Exam (DRE). The Nurse gets another pair of exam gloves and lubes up for a deep probing with first one - and then two fingers - deep into his rectum. He is not a happy camper - but it doesn't matter because the Nurse has work to do. When she has finished with the DRE, she applies K-Y to the anoscope and inserts that into the cameraman's rectum. He really squirms around and lets out a squeal when he feels that going inside! But, the Nurse gets a good look and doesn't remove it until she is satisfied. Now, she has the cameraman roll over on his back - and slide all the way down to the end of the table - she wants him spread in the stirrups. The Nurse has a prostate stimulator and she doesn't waste any time getting it lubed and inserted deep into his rectum where it touches his prostate. It is designed to apply pressure and stimulate the prostate when the anal sphincter is contracted. The Nurse requires the cameraman to masturbate and, even though he is still embarrassed and humiliated, he finds that he's caught in a "Catch-22": the pressure from the prostate stimulator causes him to get an erection, the erection cause him to constrict the anal sphincter, this causes the prostate stimulator to apply more pressure to the prostate, this causes him to become aroused . . . And around and around it goes!

To get him started, the Nurse moves it in and out and it doesn't take long before he has a full and very hard erection and he can't do anything else but masturbate for her. But now, as he gets aroused he's also getting mouthy and making comments about wanting to touch her and do the same things to her that she's done to him. She can fix that easily enough by putting a mouth spreader in his mouth! Why didn't she just gag him? Because, now that she has his mouth under control - but open - she climbs up on the exam table and squats over his face. She's enjoying putting this man through the paces --- and she's going to get off, too! She lowers herself onto his face so that his nose is buried in her vagina and she can feel his breath on her clitoris. And - she allows him the pleasure of stroking her buttocks and even slipping his finger into her rectum --- but he has to keep masturbating for her. When he stops, she spansks his thighs --- to keep him going she teases his nipples and talks "dirty" to him, all the while stroking herself and riding his face until she climaxes. Now she's ready to see the cameraman ejaculate, so she strokes his thighs and

threatens to make him stop if he doesn't do it for her soon. And, he certainly doesn't want to stop now . . . It doesn't take long for him to have an orgasm for her --- and, now that she's satisfied, she climbs off of him and the table and leaves the exam room, leaving him in the stirrups with the prostate stimulator in his rectum and a mess on his stomach . . .

TECHNICAL NOTES: The video is 75 minutes long. Video quality, props, and lighting are good. Sound is good for the beginning of the video, the oral temperature scene, the rectal temperature scene, and the vaginal temperature/nurse masturbation scene. It is non-existent for the axillary temperature scene, and fades in and out during the scene with the Nurse and the cameraman. Why did this happen? I wish I knew; I try to give you the best video that I possibly can! All that I can say is that it is a technical design flaw in the Radio Shack FM Wireless Video Camera Microphone System (Cat. No. 32-1226). It happens without warning and nothing can be done to anticipate, prevent, or correct it. This, however, has resulted in a lower price for the video. Normally it would be priced just like the other PLAY DOCTOR videos --- it is a GREAT video (the Nurse is soooo HOT) and it is most unfortunate that this technical problem occurred, but it did . . . so the price of the video is reduced.
